

## **Educational Objectives of the Health Information Systems Program**

1. Prepare qualified specialists in health information systems capable of improving the quality of healthcare services through the use of modern technologies.
2. Develop graduates' capabilities in data analysis and health information management to support decision-making and enhance the efficiency of healthcare systems.
3. Promote innovation and integration between technology and the healthcare sector through the development of advanced technological solutions that meet the needs of healthcare organizations.
4. Enable graduates to adhere to international standards in health data security and professional ethics, and support their opportunities to obtain internationally recognized professional certifications.
