

Educational Objectives of the Smart Device Application Development Program

1. Equip students with the theoretical knowledge and practical skills required to analyze, design, and develop smart device applications in line with advancements in mobile computing.
2. Prepare competent graduates with strong professional competencies, capable of competing and working efficiently in both local and global labor markets.
3. Promote entrepreneurship and innovation through the development of creative solutions that address community needs and contribute to improving quality of life.
4. Encourage lifelong learning and continuous professional development to keep pace with rapid technological changes in the field of smart devices.
5. Develop teamwork skills, professional and ethical responsibility, and the ability to work effectively within multidisciplinary teams.
