

The educational objectives for the Computer Information Systems program:

1. Preparing graduates capable of analyzing computing and information systems problems in organizations using appropriate scientific and technical foundations.
2. Enabling graduates to design, implement, and manage effective information systems solutions that support the needs of businesses and institutions.
3. Developing effective communication skills, professional responsibility, and ethical conduct among graduates in accordance with legal and regulatory standards.
4. Preparing graduates to work effectively within multidisciplinary teams to support the delivery and management of information systems efficiently.
