- **Teaching Courses**

Community nurse (Theory and clinical), Training (clinical), Physical exam (theory).
Psychiatric (Clinical).

Community Health Nursing:

This course is an application to Nursing (1001461). The course provides students with opportunities to observe, participate, and function independently using nursing skills and techniques related to health promotion, health maintenance, and health restoration as well as diseases prevention when providing care for the target groups in primary health care settings. Settings include clinics, homes, schools, and other related areas. Nursing process will be utilized throughout the provision of care at all three levels of provision.

Clinical Training

This course offers opportunities for the fourth year students to practice nursing independently at different clinical settings including hospitals, health centers and community. Through syntheses and application of previous knowledge and skills, students are assuming different roles as care providers, leaders, managers and changing agents and taking full responsibilities in a joint supervision of clinical instructors and clinical preceptors in various health care settings. Therefore, the program objectives are achieved at the end

Health Assessment

This course aims at providing students with knowledge and skills required for assessment of individual's health status during health and illness throughout their life cycle. Students are directed to use an effective communication skills to collect data about health history required for the performance of physical examinations based on the functional health patterns that affect the individual's health status. Knowledge from medical sciences and critical thinking are used to determine any health alterations of the individual.

Mental Health Nursing- Clinical

In this course, the students will apply the theoretical components from nursing (1001451). Students will directly communicate with clients who are suffering from mental and emotional disorders and receiving specific therapeutic and treatment modalities in psychiatric care settings through the utilization of nursing process. Based on knowledge gained from biological, social, psychological, humanities and nursing sciences, students will be able to assist clients and their families to select the best coping methods in dealing with life stressors, and working with mentally and emotionally disturbed individuals to retain and maintain optimal level of well-being through the normalization process.

- **Project title:**

Parent's roles in preventing adolescents smoking.

Primary prevention of type two diabetes by modifying life style

- **Research Area of interest:**

MR Mohammad Suliman areas of interest are mainly life style modification to prevent chronic diseases. Other areas of interest for MR Mohammad include geriatric healthy life style to prevent disease complications.
