The Institute of Architecture and Islamic Arts
Architectural Engineering

Course Title :Conservation of Architectural Heritage

Course Number :703561

Credit Hours :3

Pre requisite :

Placement :

Instructor: rjoub ,

Course Description :

The course investigates the basic principles of conserving the architectural heritage in old cities. It includes methods of documentation and field survey of heritage resources as well as categorization of buildings and the techniques used in the conservation process. Selected examples that were carried out in conservation from Jordan, Arab world, and foreign countries are studied.

General objectives :

Knowledge of the students in the methods (theoretical and applied) in different aspects of heritage resources conservation and management.

The role of international organizations, the governments, the private sector, and the non-governmental organizations in conserving of heritage resources.

The balance between exploitation of heritage resources and its returning of use in favor of community .

The interactive relationship between the heritage resources and the local society.

The international and local experiences in heritage conservation..
