Teaching type	Credit hours(3)	**Architectural Programming**	course number
Blended	pre-requisite 703343		**703522**
		Studying the basics of programming necessary to prepare and analyse the architectural program for various projects in a way that reflects the design and performance requirements, the needs of the employer and the determinants of the building style. Scheduling projects during the implementation stages, in addition to evaluating the performance of buildings after occupancy (Post Occupancy Evaluation) and the extent of compatibility between the design standards announced in the initial design stages and the outputs of the final design process.
