

Teaching type	Credit hours(6)	Graduation Project Design	course number
face-to-face	pre-requisite successful in 703591		
<p>This course is concerned with designing the project, for which the research was prepared in the first stage (The Graduation Research). The design includes a comprehensive analysis of the architectural concept and design philosophy, as well as the alternatives, their evaluation, approval and development based on the approach, the idea and philosophy in which the student communicates with the supervisor. As well as developing an integrated study of the internal and external spatial space and linking the design elements into an integrated composition and studying the circulation system inside and outside the project, so that the construction system and technical services integrate with the overall architectural and environmental design, with the provision of all architectural drawings expressing the design idea, and the project model. The course includes several stages of external and internal arbitration.</p>
